- USD-equivalent cover value of US Treasury securities is calculated as follows: accrued interest plus mid-price multiplied by principal less applicable US Treasury securities “haircut”.
- Cover value of US Treasury securities used to cover a specific non-USD currency obligation is computed by foreign exchange “haircutting” the corresponding USD-equivalent cover value, where the applicable foreign exchange “haircut” (see slide 4) captures the potential foreign exchange risk between the USD cash and the currency of the obligation.
- ICUS will set the value of maturing US Treasury securities deposited to satisfy margin and guaranty fund requirements to \$0 two business days prior to maturity.
